【Impact reporting】

ICMA GBP business category	Eligibility criteria	Impact reporting indicators
Clean transportation	Capital expenditure for the production of PVDF for automotive lithium-ion secondary batteries	・ Product overview ・ Annual production capacity : –※ ・ Estimated contribution to CO2 emission reductions : –※

※ To be disclosed after commencement of production

< Product overview >

PVDF is used as a binder material for lithium-ion secondary batteries (LiBs), as well as an engineering plastic for general industry. Demand for its use in automotive LiBs has been expanding in recent years due to increasing awareness of environmental protection in many countries. In response to customers' requests for a greater supply and to further expand our PVDF business,

which is positioned as our largest business, we will make the largest capital investment in Company history to expand our production facilities, including the adoption of technologies to reduce environmental impact. Kureha has been qualified to receive government grants for this project to expand PVDF production facilities.
